Intermittent Inability to Select/Edit Contentlets in Edit Mode

Content authors are intermittently unable to select, click, or edit specific contentlets located in the middle sections of certain pages while working in Edit/Draft Mode.

Sometimes, only a single contentlet may remain selectable, even if the page contains 6–10 independent contentlets. The rest of the contentlets become completely unresponsive to clicks.

This appears to be a structural, layout-rendering, or state-handling issue rather than a total page freeze, as parts of the UI remain interactive.

Steps to Reproduce

1. Log into the dotCMS backend for the firstmac-dev.dotcms.cloud instance.
2. Navigate to the Pages tool and switch to the www.loans.com.au website instance.
3. Open any of the affected pages listed below.
4. Ensure the page editor is set to Edit Mode (Draft).
5. Attempt to click or select the contentlets located in the middle area of the screen.

examples of pages where contentlets aren't selectable:

https://firstmac-dev.dotcms.cloud/dotAdmin/#/edit-page/content?url=%2Flanding-pages%2Fhome%2Fbarebold-home-loan-refinance-search&language_id=1&host_id=da4f7456-bc3a-4404-8d1e-406ba15e7fc9&mId=edit&mode=EDIT_MODE

https://firstmac-dev.dotcms.cloud/dotAdmin/#/edit-page/content?url=%2Fcaravan-loans%2F&language_id=1&host_id=da4f7456-bc3a-4404-8d1e-406ba15e7fc9&mId=edit&mode=EDIT_MODE

https://firstmac-dev.dotcms.cloud/dotAdmin/#/edit-page/content?url=%2F&language_id=1&host_id=da4f7456-bc3a-4404-8d1e-406ba15e7fc9&mId=edit&mode=EDIT_MODE

Temporary Workarounds

but users have reported inconsistent success with the following workarounds (none are 100% reliable):

Mode Toggling: Switching the page view from Edit Mode to Preview/Published Mode, and then toggling back to Edit Mode sometimes restores selectability.

Hard Refresh: If mode toggling fails, doing a browser refresh (F5 / Ctrl + F5) occasionally forces the container overlays to re-render correctly.

Hi Glenn,

Thank you for reaching out!

We are currently investigating this issue and will inform you of our findings as soon as we complete our testing on our end.

Best regards,

Hi,

Lets go with option 1. Thank you!

by **Rafael Velazco** on **Mon, 15 Jun at 12:24 PM** as **Outbound email**

Hi Glenn,

Thanks for reporting this issue and helping us improve dotCMS.

We've logged it for our engineering team and created a linked GitHub issue for visibility:

<https://github.com/dotCMS/core/issues/36167>

Please confirm how you'd like us to proceed:

Option 1: Keep this ticket on **hold** — we'll update you once the fix is released.

Option 2: **Close** this ticket now — you'll track updates directly through GitHub and your CSM.

Our development teams work in 2-week sprint cycles. Each issue moves through:

- **Triage & Evaluation** – Review and prioritization
- **Fix Development & Testing** – Implementation and validation
- **Release / Backporting** – Deployment to supported versions

Because fixes are released in planned sprints, timelines vary. If the issue becomes business-critical, please reach out to your **CSM** to discuss prioritization.

Please let us know your preference — whether to keep this ticket on hold or close it now.

Thank you for your patience and understanding as we work to resolve this.

Hi Glenn,

I am following up on this case to see if you have had a chance to review our last email and if you have any updates or questions regarding this case.

If we do not hear back within the next three business days, we will mark this case as solved.

Please feel free to contact me if you need any more help.

Hi Abdul,

may we get an update on when would this bug be fixed? - UVE: Unable to edit page when document.write re-executes inline scripts and throws 'already declared...

by **Neeha Kethi** on **Thu, 25 Jun at 11:20 PM** as **Outbound email**

Hi Glenn,

Thanks for reaching out.

We've set the status to **"On Hold"** while Engineering reviews the linked GitHub issue.

You can expect our subsequent follow-up on the next Maintenance Sprint planning Day, or sooner if the fix is included in an upcoming release.

At this time, we can't confirm any ETA on when it will be included in a sprint or release, but we'll keep you

informed as soon as that changes.

If you'd like to increase the priority, please get in touch with your **CSM**.

Thank you for your patience and understanding.

Neeha Kethi Daniel Silva

Do we have a workaround for the customer? This is a pretty urgent need for them as this issue is significantly impacting their operations, as their content team is currently unable to perform necessary page updates across our websites. They also have a major content update scheduled for this week and this bug poses a big challenge to their timeline.
