Card Carousel Content Not Displaying in Editor (Draft & Preview)

Hello Team,

Our client has reported an issue in the editor where content from the "Card Carousel" content type is not being displayed in either Draft or Preview mode.

This component is typically used across the model index pages, for example:
/modelos/creta-2026/index

As background, a few weeks ago we noticed a similar behavior with the "Hero Carousel" component, which was also not loading in the editor. After a maintenance window, the issue appeared to be resolved.

Could you please help us investigate this behavior? We find it noteworthy that both cases involve carousel components, so we are wondering if there could be a related underlying issue.

Please let us know if you need any additional information from our side.

Thank you for your support.

Best regards,
Sherlyn

Hi Sherlyn,

Thank you for getting in touch. I'm currently examining this in your authoring environment and will inform you of my findings as soon as I can.

[12/06/26 13:45:48:510 UTC] ERROR model.Contentlet: Found Tag with id [54fdda88-6c1c-4f33-ae00-af26ad3571c4] related with Conter

by **Neeha Kethi** on **Wed, 17 Jun at 5:26 PM** as **Private note****Investigation notes — Card Carousel blank in editor (Draft & Preview)**

ROOT CAUSE (confirmed): Front-end theme issue, NOT a content/index/backend or dotCMS core bug. The Card Carousel slider (jQuery Slick) is initialized in the theme module `/components/cardCarousel/js/cardCarousel.js` only inside a one-time `$(document).ready()` handler (`ccLoadCarousel() → .slick({...})`). In the UVE editor the page content is rendered/re-rendered dynamically (dot-uve.js), so that one-shot init never runs against the carousel's final DOM. Slick never initializes (no `slick-initialized/slick-loading` class), and the `.cc-wrapper` stays in its pre-init `visibility:hidden` state → blank area in Draft/Preview. On the published site the script runs at page load, so it renders fine.

WHY REINDEX DIDN'T HELP: The content is fully intact. This is purely a client-side init-timing issue, so reindex/cache-flush has no effect.

EVIDENCE (verified in customer's authoring env, read-only):

- Page render API (`/api/v1/page/json|render`) for `/modelos/creta-2026/index`: Card Carousel container returns 1 contentlet — "Hyundai SmartSense™" (inode `0c0182a9-...`, identifier `86271b7d-...`) — in BOTH WORKING and LIVE, same version (no divergent draft).
- Server renders the full carousel HTML in EDIT_MODE too: 5 `cc-slide` cards present (edit HTML 9,997 chars vs live 9,172). Content is NOT missing in the editor markup.
- In the editor iframe: `.cc-wrapper` is 4,843px tall, opacity 1, 5 slides laid out, but computed `visibility:hidden`; all ancestors visible. Carousel has neither `slick-initialized` nor `slick-loading` — Slick never ran.
- Forcing `visibility:visible` at runtime (not saved) revealed the cards (rendered as static stacked cards since Slick isn't initialized) — proves content present + display/init gate.
- `cardCarousel.js` loads fine in the editor (HTTP 200, valid JS MIME) — not a 404/MIME/module-load problem. The module's init is the issue: `const cardCarousel = function($){ $(document).ready(function(){ ccLoadCarousel(); }); ... }.`

RE: customer's question about a shared underlying issue (Hero Carousel): Yes — same root cause. Hero Carousel renders in the editor now; it was "resolved after a maintenance window," almost certainly because its init was made UVE-aware. CardCarousel still uses the plain one-shot `$(document).ready()`. The diff between `heroCarousel.js` and `cardCarousel.js` init is the fix.

RECOMMENDED FIX (customer theme code):

- Make the init idempotent: `$('.cc-wrapper ...').not('.slick-initialized').slick({...})`.
- Re-run it when UVE re-renders — hook dot-uve.js content-render event or attach a MutationObserver on the page body that (re)initializes new/un-initialized `.cc-wrapper` carousels. Keep `$(document).ready` for the live site.
- Mirror the HeroCarousel init pattern (already works in the editor).

4. Safety net: don't leave .cc-wrapper permanently hidden if Slick fails to init (degrade to visible static cards).
5. Verify in UVE Draft AND Preview for both Card and Hero.

OWNERSHIP / ESCALATION: Fix is in the customer's custom theme (cardCarousel.js) — no dotCMS core GitHub issue warranted. No T2/T3/Cloud Eng escalation needed.

NOISE (ruled out): The model.Contentlet: Found Tag ... without an associated Field var name log is a non-fatal orphaned tag_inode log (Contentlet.java:1561), unrelated to the blank render. The /dA/83cfc410c8/1140w/ 404 is a stray image-variant request, also unrelated.

Investigation performed read-only via the page API and editor DOM inspection; no changes made to content or environment.

Hi Sherlyn,

We appreciate your patience as we investigated this matter.

We now have some insights into the issue and believe it may be related to your own JavaScript files rather than to dotCMS.

We are verifying this with our front-end developers to ensure accuracy on our part. We will update you as soon as we receive their feedback and provide further details about the issue.
